Clean-Air Solar Food Dryers

Sun-powered, hygienic food drying for farms, households and food businesses — two proven models, engineered and built in Bangladesh by NSP.

Nobo Shakti Prokushal (NSP) · www.noboshaktiprokushal.com

WHY SOLAR DRYING, WHY NSP

Better Food. Higher Income. Zero Fuel Cost.

Open-sun drying exposes food to dust, insects, animals and sudden rain — and the sun alone is free but unreliable. NSP dryers put the same free sunshine to work inside a clean, enclosed, filtered chamber, so every batch dries faster, safer and to a quality buyers actually pay a premium for.

- **Zero fuel, zero bills.** Sunlight does the work. No gas, no firewood, no generator running costs.
- **Hygiene you can sell.** A fully enclosed drying chamber with filtered air intake keeps out dust, flies and insects — food-safe quality for retail and export buyers.
- **Better colour, taste and nutrition.** Gentle, controlled warm air protects vitamins and natural colour far better than scorching open sun.
- **Weather-independent.** Rain or cloud outside, your product stays protected inside — no more lost batches.
- **Higher income per kilo.** Clean, evenly dried mango, chilli, fish and herbs command 2–4× the price of sun-dried produce.
- **Built to last in Bangladesh.** Galvanised steel, food-grade trays and rust-proof hardware — designed for village conditions and easy local repair.

	Open-sun drying	NSP solar dryer
Dust, flies, insects	Constant exposure	Fully excluded — enclosed, filtered chamber
Rain / cloud risk	Whole batch can be lost	Product always protected
Drying time (mango)	3–5 days, weather permitting	≈ 2 clear days, even and predictable
Colour & nutrition	Faded, heat-damaged	Bright colour, nutrients retained
Market value	Low — sold as raw produce	Premium — hygienic, packaged dried food

Open sun vs. NSP clean-air solar drying — the difference buyers can see.

MODEL M1 · ROOFTOP FIXED

NSP-SD12 Rooftop Solar Dryer

Field photo: an NSP rooftop dryer in service — free sunshine, zero floor space used.

Turn your empty rooftop into a food-processing unit. The SD12 sits above the dust and the street, where the sun is strongest — drying your produce in clean, filtered warm air while the space below stays free for living and working.

- **Uses zero floor space.** Installs on any flat rooftop — perfect for homes, schools and workshops.
- **Twelve large food-grade trays.** Dry roughly 8 kg of fresh slices over two clear days — batch after batch, all season.
- **Twin solar collectors.** Generous collector area keeps hot air flowing even in mild winter sun.
- **Set it and forget it.** Natural convection drives the airflow — no fan, no electricity, nothing to switch on.
- **Locked, enclosed and hygienic.** Filtered intake keeps out dust and insects; your product is safe day and night.
- **All-weather galvanised build.** Made for monsoon and summer alike, with simple parts any local workshop can service.

Ideal for	Rooftop owners, homestead producers, women's cooperatives, schools and small processors who want a permanent, zero-running-cost drying station.

MODEL M2 · MOBILE / HYBRID

NSP-M2 Mobile Solar Dryer

Field photo: the NSP-M2 at a produce collection point — roll it to the harvest, not the other way round.

The dryer that comes to the crop. The M2 is a complete drying station on wheels — park it beside the orchard, the market shed or the landing site, load the trays, and let the sun do the work. When the sun sets, an optional backup heater keeps drying through the night.

- **Fully mobile.** Sturdy wheels and a compact body — one person can roll it through a standard doorway and position it anywhere.
- **Dries day and night.** Solar by day; an optional low-power hybrid heater keeps the batch moving overnight or through cloudy spells — no more half-dried produce.
- **Serious capacity in a small footprint.** Multiple food-grade trays handle a full day's harvest of mango, chilli, fish or herbs in one go.
- **Enclosed, filtered, food-safe.** The sealed chamber and filtered intake deliver the clean, consistent quality that packaged-food buyers demand.
- **Simple to run.** Load, latch, done. No training, no fuel management, no complex controls.
- **Built NSP-tough.** Galvanised steel and food-grade stainless trays, engineered for years of daily commercial use.

Ideal for	Farmer groups and collection points, market yards, fish landing sites, caterers and growing food SMEs that need drying capacity where the produce actually is.

WHAT YOU CAN DRY

One Dryer, a Whole Market of Products

If it grows in Bangladesh, an NSP dryer can preserve it. Dried produce keeps for months, travels well, and sells long after the harvest glut has pushed fresh prices down.

Fruits Mango, pineapple, banana, jackfruit, papaya — chips, bars and slices for retail.	**Spices** Chilli, turmeric, ginger, garlic — brighter colour and stronger aroma than sun-dried.
Herbs & leaves Moringa, mint, curry leaf, tulsi — gentle heat protects active compounds.	**Vegetables** Tomato, onion, bitter gourd, mushroom — soup and cooking ingredients year-round.
Fish & seafood Small fish and shrimp in a sealed, insect-proof chamber — the hygiene buyers insist on.	**Flowers & seeds** Marigold, hibiscus and oilseeds for tea, cosmetics and planting.

WHO BUYS NSP DRYERS

Made for Every Scale of Producer

- **Farmers & households** — stop post-harvest losses, turn surplus into a product that keeps and sells.
- **Women's groups & cooperatives** — a shared dryer becomes a shared business: dried fruit, spice and fish brands.
- **Food SMEs & startups** — consistent, hygienic quality that supermarkets and online buyers accept.
- **Commercial processors & NGOs** — dependable capacity for contract drying, relief nutrition and livelihood projects.

ENGINEERED IN BANGLADESH, TRUSTED SINCE 2007

NSP — Nobo Shakti Prokushal — has designed and built clean-air engineering systems for over 40 hospitals and industries across Bangladesh. The same engineering discipline goes into every solar dryer we ship: honest materials, careful workmanship, and support you can actually reach.

TALK TO US

We'll help you choose the right model, arrange a demonstration, and support installation anywhere in Bangladesh.
